

Supplementary FIGURE S1: Primers for the 16S rRNA gene of *C. pneumoniae* and *C. trachomatis* do not show inter-species cross-reactivity. Gel electrophoretogram of PCR products for *C. pneumoniae* and *C. trachomatis* using primers for the 16S rRNA gene of both chlamydial species. Positive controls are genomic DNA from ATCC and negative controls are ultra-pure water. Cpn: *C. pneumoniae*; Ct: *C. trachomatis*; H₂O: water.
